

**GeoPost's commitment to sustainable development.
October the 16th 2006**

The efficient transport of goods has always been the key condition for trade between nations and hence for the development of our societies. GeoPost brings together companies that are able to offer their clients reliable transport services at the best price. The profitable growth of our group constitutes the best testimony to our clients' trust in us – a trust that we will further increase through our commitment to ever more sustainable development based on the following priorities.

Transport in urban centres.

Nobody can fail to be aware of the increasing difficulties that we encounter in our urban centres, asphyxiated, both literally and figuratively, by traffic jams and the consequences this has for the urban habitat. Hence, GeoPost is committed to devising innovative solutions for its deliveries in town centres. It would be paradoxical if shops had to abandon town centres due to the lack of adequate logistical services when they often benefit from the best public transport services. By using our networks for the delivery of their parcels, our clients will be working alongside us to preserve the urban environment.

Contributing to road safety.

As a service company, GeoPost bases its effectiveness on that of its employees. It goes without saying that GeoPost operates within the laws and regulations that control its activity in particular with regard to the many small transport companies that allow us to ensure a quality presence everywhere. But driving carries a risk. That is why we invest in the training of our people to prevent accidents and improve road safety.

Transporting better to reduce our greenhouse gas emissions.

GeoPost is particularly proud of the efficiency of its European road networks which enable it to maintain a high quality of service. In the coming years we are convinced that more shippers will opt for road as against air transport for their goods. This will lead to a reduction of the greenhouse gas emissions by 9 for each kg transported. The increasing densification of our network and the permanent optimisation of our routes will also lead to a reduction in greenhouse gas emissions for each parcel that we carry.

Incorporating sustainable development objectives in our result-based culture.

GeoPost bases its success on giving responsibility to its local managers and on a shared commitment to obtaining results. The exchange of best practices then reinforces the group's efficiency. The same applies to the monitoring of our priorities in terms of sustainable development, and that is why I have drawn up 6 indicators that will be included in our key business indicators.

This is my commitment to ever more sustainable development.
